

# Smart Contracts

Ujjwal Kumar

Senior Technology Evangelist, Microsoft Singapore

# Things to Think About

- Identify participants in the [new] process
- Model the workflow for the process
- Model the activities within the process
- Identify the participants in the activity
- Identify who needs to participate in the activity (vs. get visibility of the state)
- Identify the rate or likelihood of change for both process and activities
- Understand the interdependencies between the activities

# Step 1 – Identify the Participants in the Process

For your scenario, identify all of the participants and their roles in the section below

_____	_____
Participant	Role

_____	_____
Participant	Role

_____	_____
Participant	Role

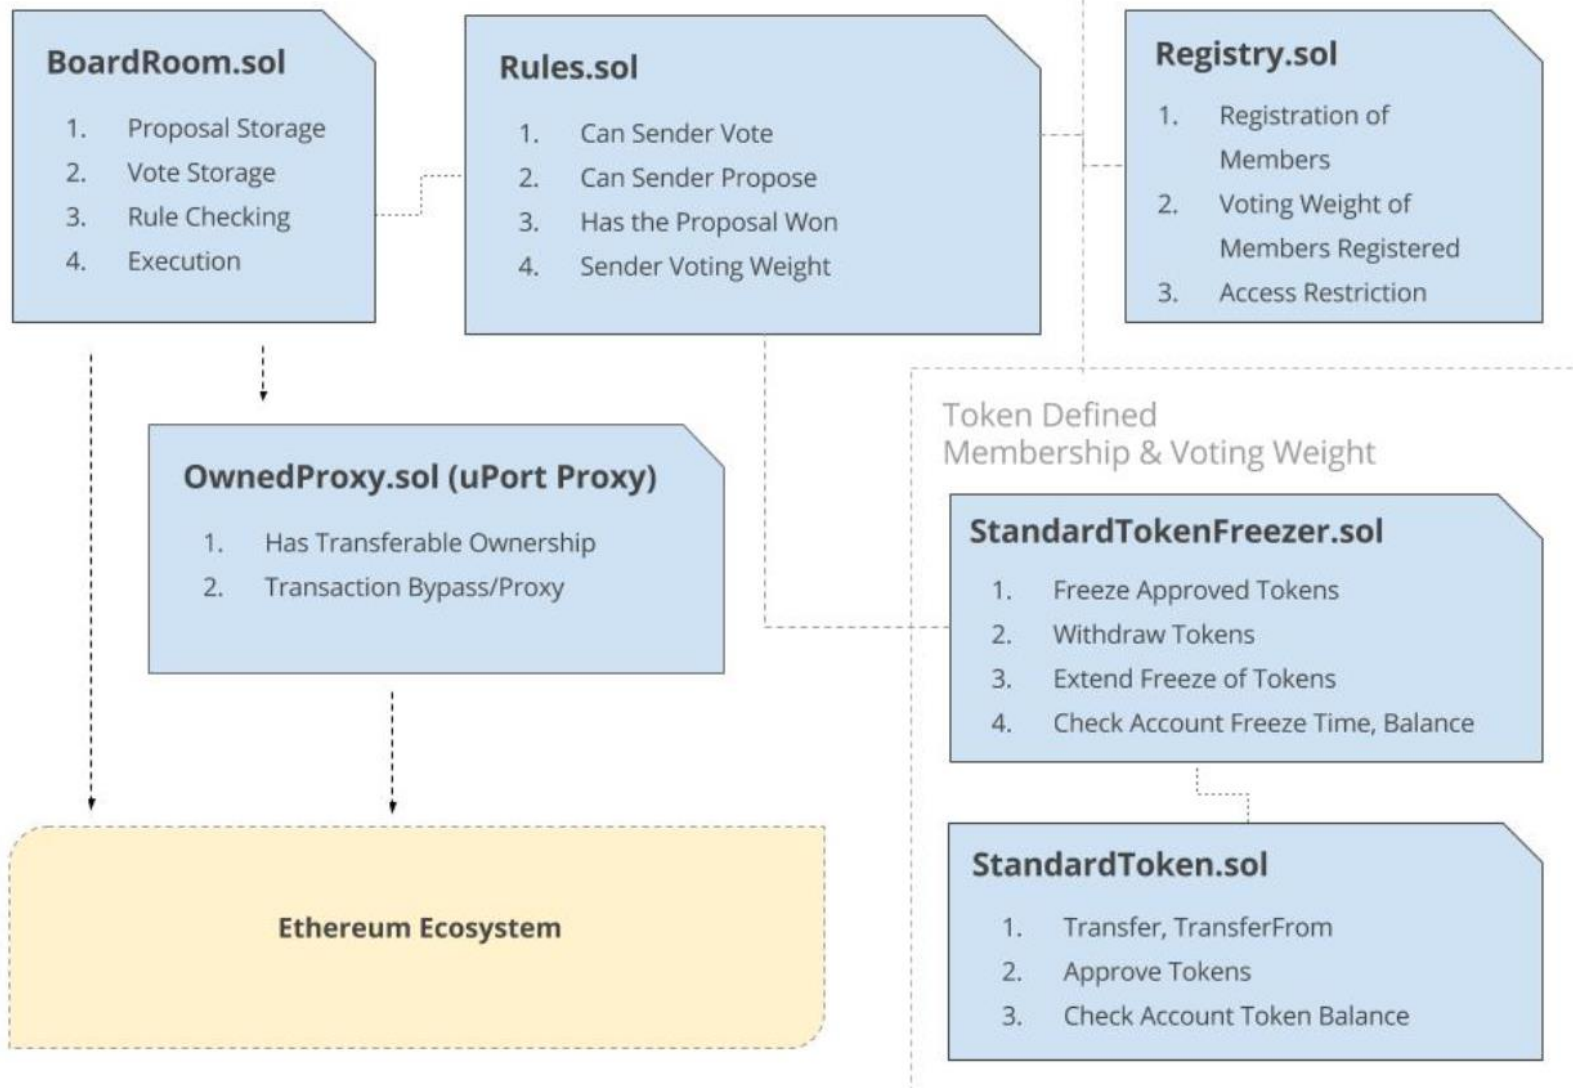

_____	_____
Participant	Role

_____	_____
Participant	Role

_____	_____
Participant	Role

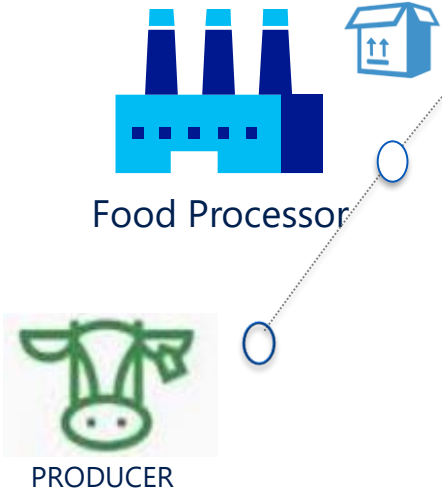

# Standard BoardRoom Contract Design

# Detailed Use Case - Supply Chain with IoT and blockchain

The Food product is sealed in an IoT enabled package for shipping

The terms of shipping are registered using a **smart contract** on the Blockchain

Milk producer supplies Milk to Food Processing Company

The package has to be maintained at:  
**Temperature < 10° C**  
**Humidity < 65%**

SMART CONTRACT

**11° C**  
**66%**

Retail Store

The conditions of the contract have been violated.

Carrier 2 is liable for penalty as the temperature of the package when it reached the retail store was above the prescribed limit

At various points in the journey, the IoT device from the package sends the Temperature & Humidity data which are recorded on the blockchain

SHARED LEDGER			
Origin	8° C 60%	Warehouse	9° C 64%
Carrier 2	9° C 64%	Store	11° C 66%

## Security & Management

- Security Center
- Portal
- Azure Active Directory
- Azure AD B2C
- Multi-Factor Authentication
- Automation
- Scheduler
- Key Vault
- Store/Marketplace
- VM Image Gallery & VM Depot

## Platform Services

### Media & CDN

- Media Services
- Media Analytics
- Content Delivery Network

### Integration

- API Management
- BizTalk Services
- Logic Apps
- Service Bus

### Compute Services

- Container Service
- VM Scale Sets
- Batch
- RemoteApp
- Dev/Test Lab

### Application Platform

- Web Apps
- Mobile Apps
- API Apps
- Cloud Services
- Service Fabric
- Notification Hubs
- Functions

### Developer Services

- Visual Studio
- Mobile Engagement
- VS Team Services
- Xamarin
- Application Insights
- HockeyApp

### Data

- SQL Database
- SQL Data Warehouse
- DocumentDB
- SQL Server Stretch Database
- Redis Cache
- Storage Tables
- Azure Search

### Intelligence

- Cognitive Services
- Bot Framework
- Cortana

### Analytics & IoT

- HDInsight
- Machine Learning
- Stream Analytics
- Data Catalog
- Data Lake Analytics Service
- Data Lake Store
- IoT Hub
- Event Hubs
- Data Factory
- Power BI Embedded

## Hybrid Cloud

- Azure AD Health Monitoring
- AD Privileged Identity Management
- Domain Services
- Backup
- Operational Analytics
- Import/Export
- Azure Site Recovery
- StorSimple

## Infrastructure Services

### Compute

- Virtual Machines
- Containers

### Storage

- Blob
- Queues
- Files
- Disks

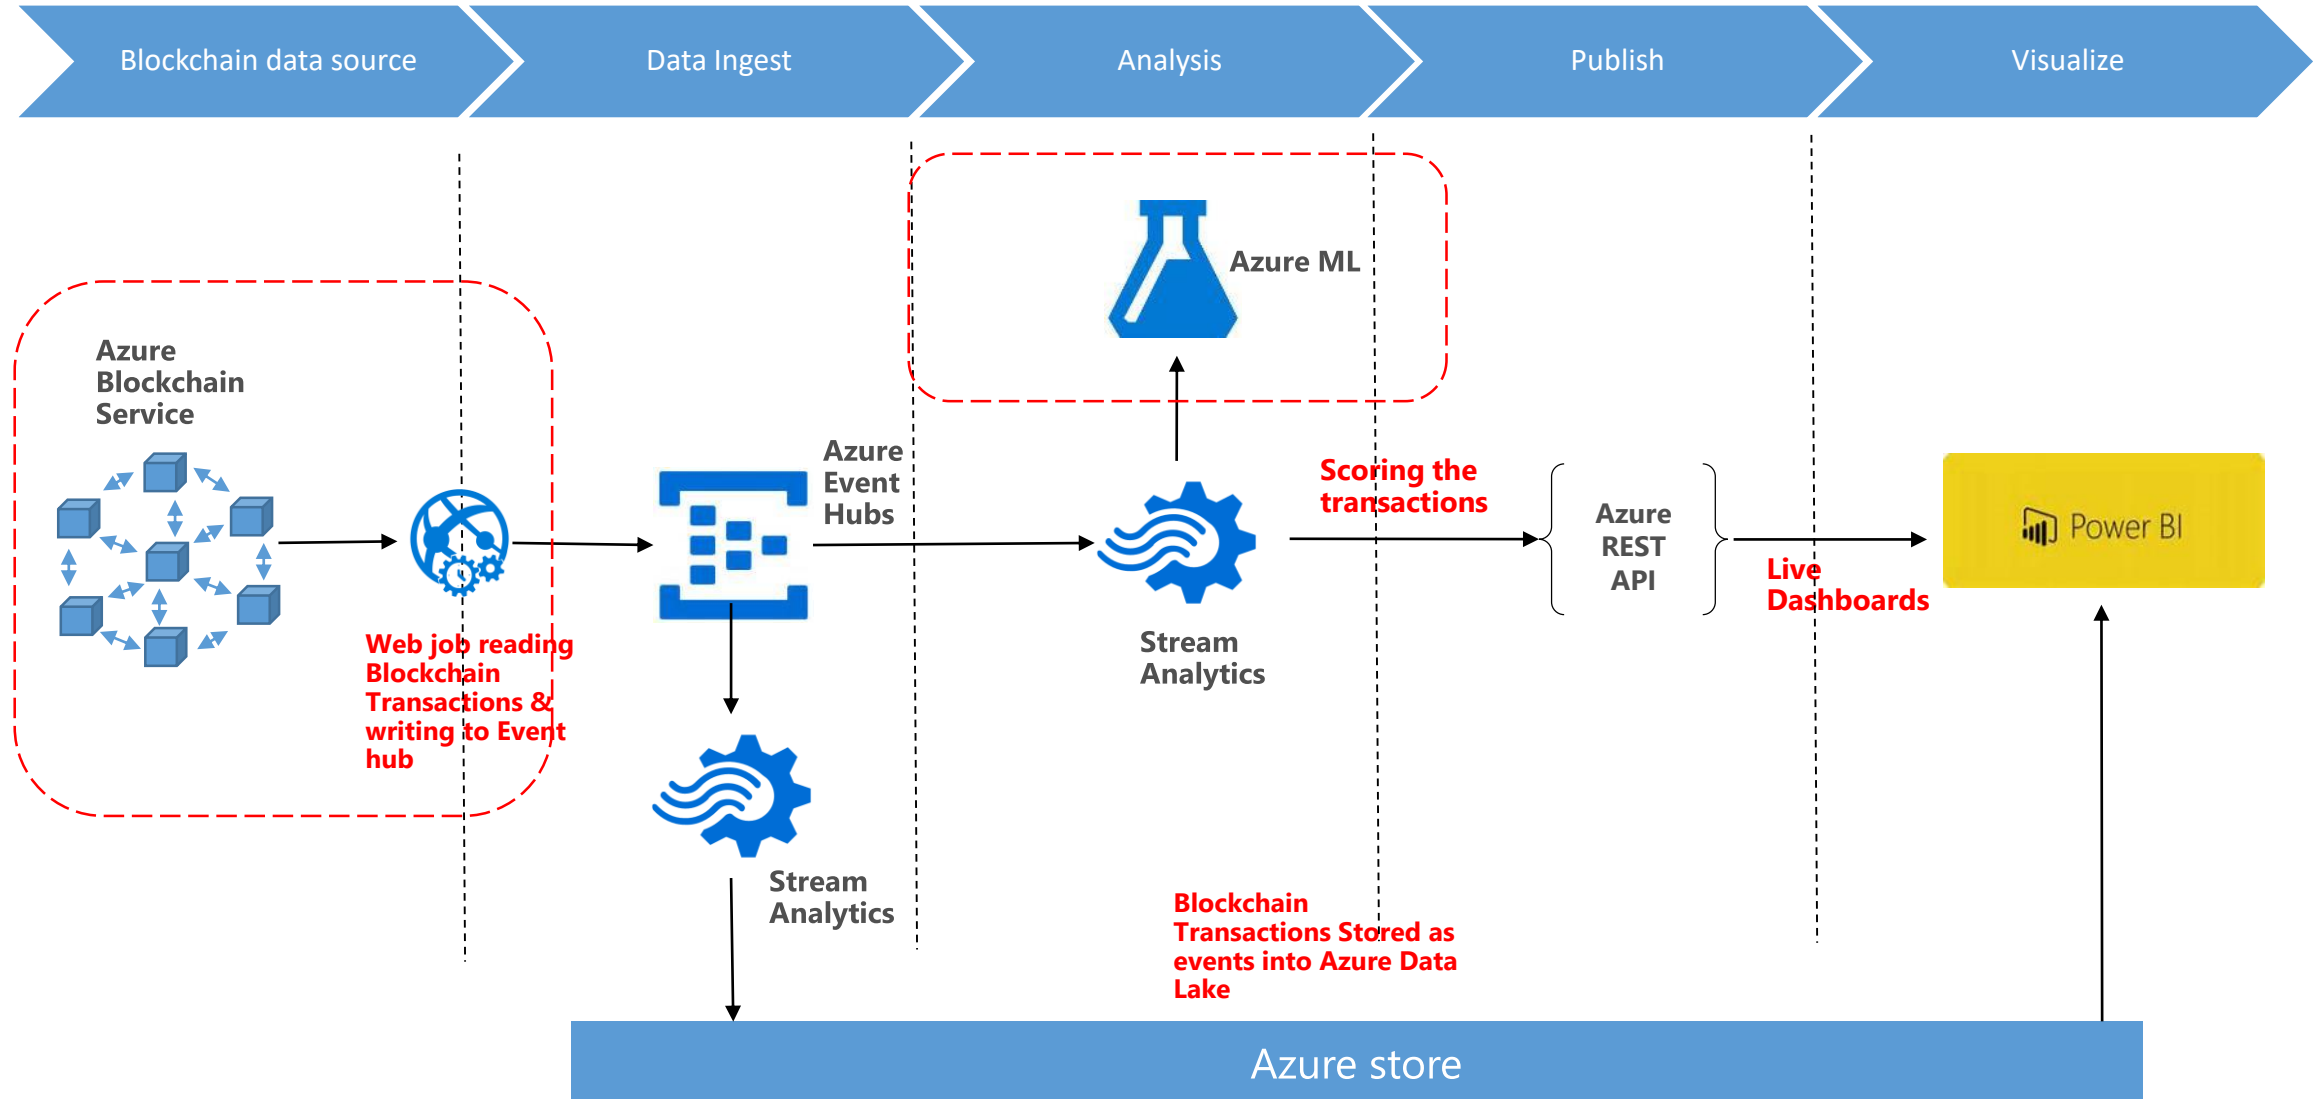

### Networking

- Virtual Network
- Load Balancer
- DNS
- Express Route
- Traffic Manager
- VPN Gateway
- App Gateway

## Datacenter Infrastructure (38 Regions)

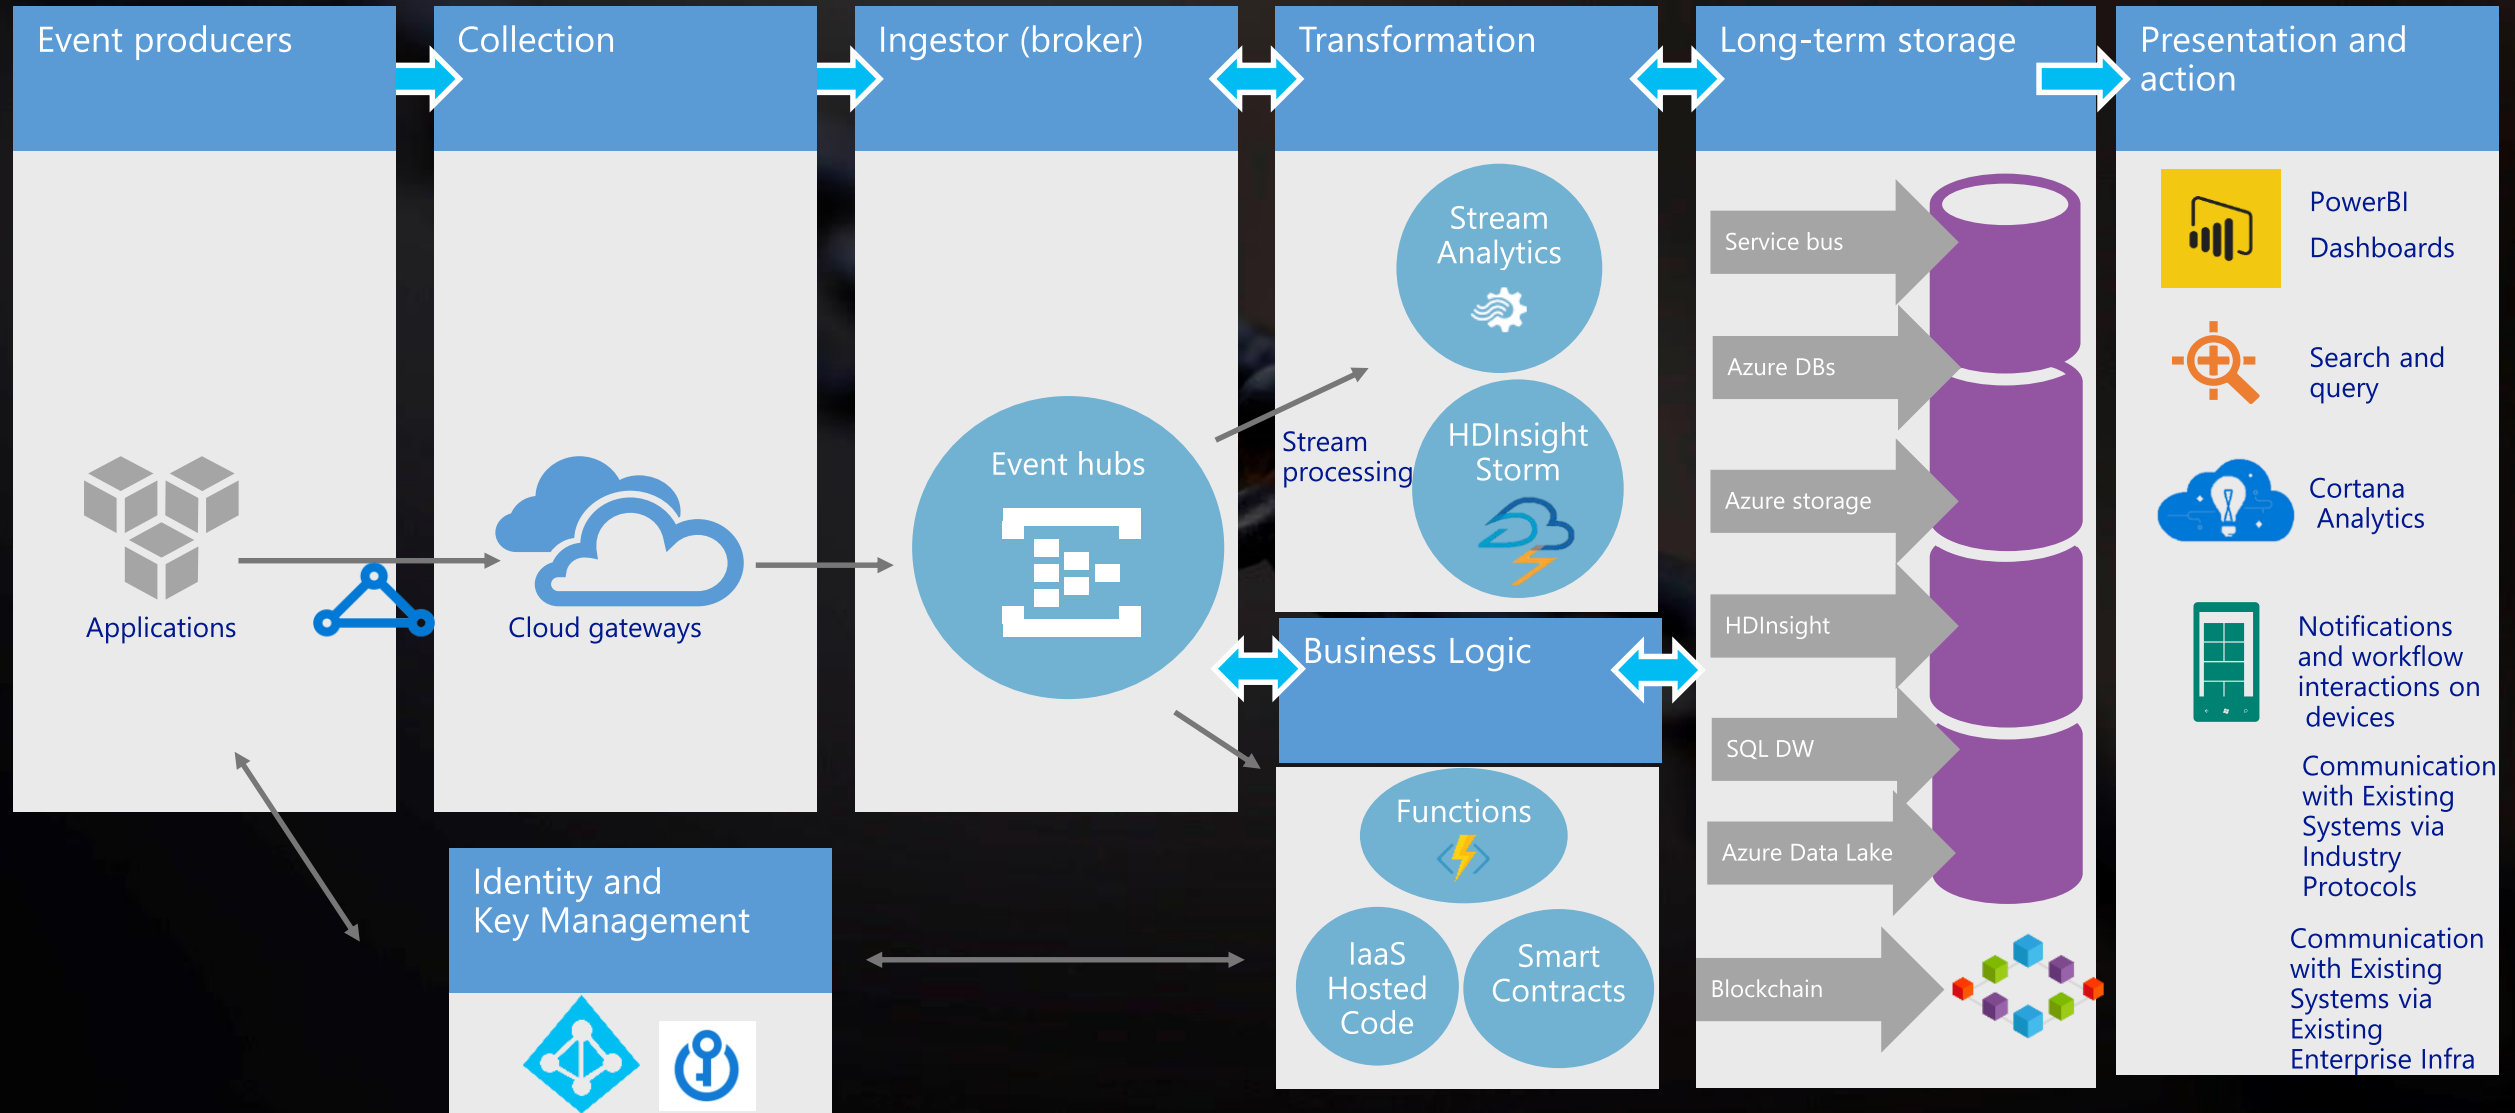

# Blockchain Data Intelligence Architecture

# Reference Architecture

# Why Microsoft Azure Blockchain as a Service

## **FAIL FAST & CHEAP**

in a development test environment

## **MIX & MATCH**

from the best available blockchain technologies

## **CREATE & INNOVATE**

by building solutions on blockchain quickly

## **SHARE SOLUTIONS**

through a worldwide distributed platform

## **PROVISION**

with one-click to test & iterate
