Opportunities exist across industries

Retail

- Real Time Offers & Personalized Services
- Demand Forecasting
- Sentiment Analysis

Real Estate

- Predictive maintenance
- Remote monitoring

Financial Services

- Customer Experience
- Risk Assessment

Health

- Remote Health Monitoring
- Population Health Management

Government

- Smart Buildings
- Transit & Traffic Optimization

How are businesses in Singapore transforming with big data and machine learning?

Smart City in a box

Surbana Jurong and Microsoft develop cloud-based Smart City in a box solutions, enhance app offerings

Posted November 25, 2016 By Singapore News Center

Singapore, 25 November 2016 – Surbana Jurong and Microsoft announced today that they have signed a Memorandum of Understanding (MOU) to jointly develop cloud-based Smart City in a Box solutions, while enhancing its suite of applications, in the Asia Pacific region.

Launched in July 2016, Surbana Jurong's Smart City in a Box is an integrated set of solutions with a dashboard that allows city officials to load customisable applications (Apps) in four key areas – security, efficiency, sustainability and community. This enables them to track, monitor and manage cities better.

Intelligent Digital Representatives

"I believe there are more intuitive ways for government services to be delivered to our citizens. Everybody expects responsive and personalised interactions in real time."

- Dr Vivian Balakrishnan, Minister for Foreign Affairs and Minister-In-Charge of the Smart Nation Initiative

The background of the slide is a photograph of the Golden Gate Bridge in San Francisco. The bridge's red-orange towers and suspension cables are visible against a hazy sky. In the foreground, a person wearing a yellow shirt and blue jeans stands with their back to the camera, holding a camera up to take a picture of the bridge. A metal crowd control barrier is in front of them. The overall scene is a scenic view of the bridge from a pedestrian walkway.

UBER

"Thousands of partners sign in to our platform every hour. The response time from the Face API is incredible, enabling us to verify our drivers without slowing them down."

Dima Kovalev, Product Manager, Uber

Posted December 10, 2015 By Allison Linn

Microsoft researchers on Thursday announced a major advance in technology designed to identify the objects in a photograph or video, showcasing a system whose accuracy meets and sometimes exceeds human-level performance.

Microsoft's [new approach](#) to recognizing images also took first place in several major categories of image recognition challenges Thursday, beating out many other competitors from academic, corporate and research institutions in the ImageNet and Microsoft

Artificial Neural Networks

- Simulates a human brain
- Each time the NN completes a cycle, the hidden nodes are adjusting their weights.
- Weights are adjusted by backpropagation

Case study and demo: Liebherr Intelligent Fridges

“Liebherr refrigerators will help in shopping and planning meals with intelligent food management. This information flows automatically into an inventory list, which lets the customer see quickly and clearly what is in the refrigerator from anywhere. ”

Case study: Protecting the Masai Giraffe with Wild Nature Institute

“Using this technique, the scientists monitor seasonal survival, reproduction, and movements of over 2000 different individual giraffe around the Tarangire Ecosystem of Tanzania.”

Microsoft Cognitive Toolkit

- Free and open-source
- Works with CPUs and GPUs and scales to multiple machines
- Includes prebuilt algorithms for implementing neural networks
- Production-grade DNN tool
